## *SETTING UP OBERON HEADSET FOR DISTANCE SCANNING/THERAPY*

---

Distance therapy and scanning means that you do not have a person present. Instead, you have a person's nail clippings or hair samples which can be used to scan and treat the person when they cannot be present for the scan/therapy with Oberon.

Here is a suggested "set up" for distance therapy and scanning using the Oberon headset.

Step 1: Have a small piece of plain paper to fold the nail clippings or hair samples into

Step 2: Fold the paper over the nail clippings (write patients/clients name anywhere on the paper)

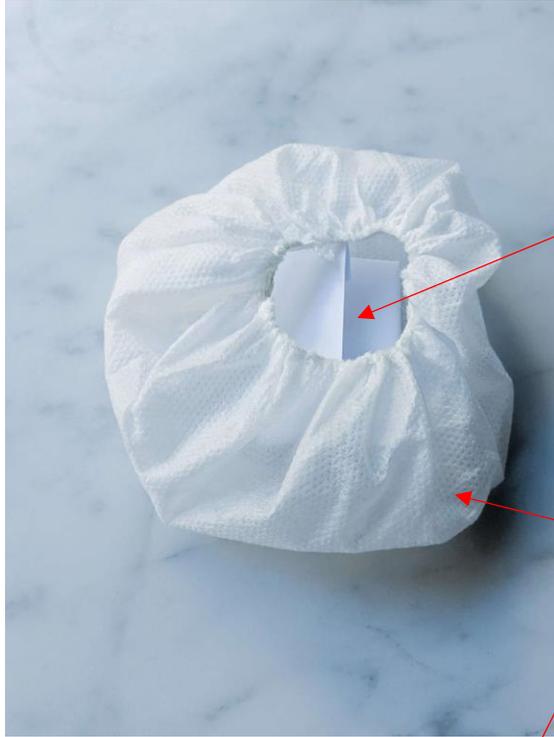

Having the sample folded in paper ensures that the sample stays in place as well as avoiding any plastic. Recommend not to use tape to hold in place. Once you place the sample into the disposable headset cover, it will stay in place well.

Step 3: Have 2 disposable headset covers ready. These disposable headset covers can be purchased online ([link in training page](#)) and can also be stored and re-used for the same client each session.

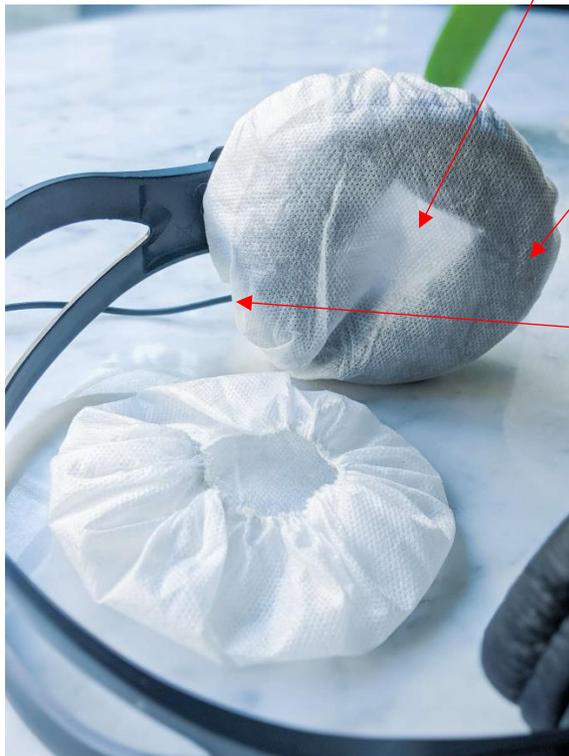

Step 4:

Place the paper with nail clippings into the LEFT side of the Oberon headset (side with the wire) and cover with one disposable headset cover to hold in place

Sample (Nail clippings/hair)

Headset Cover

LEFT side of headset (wire side)

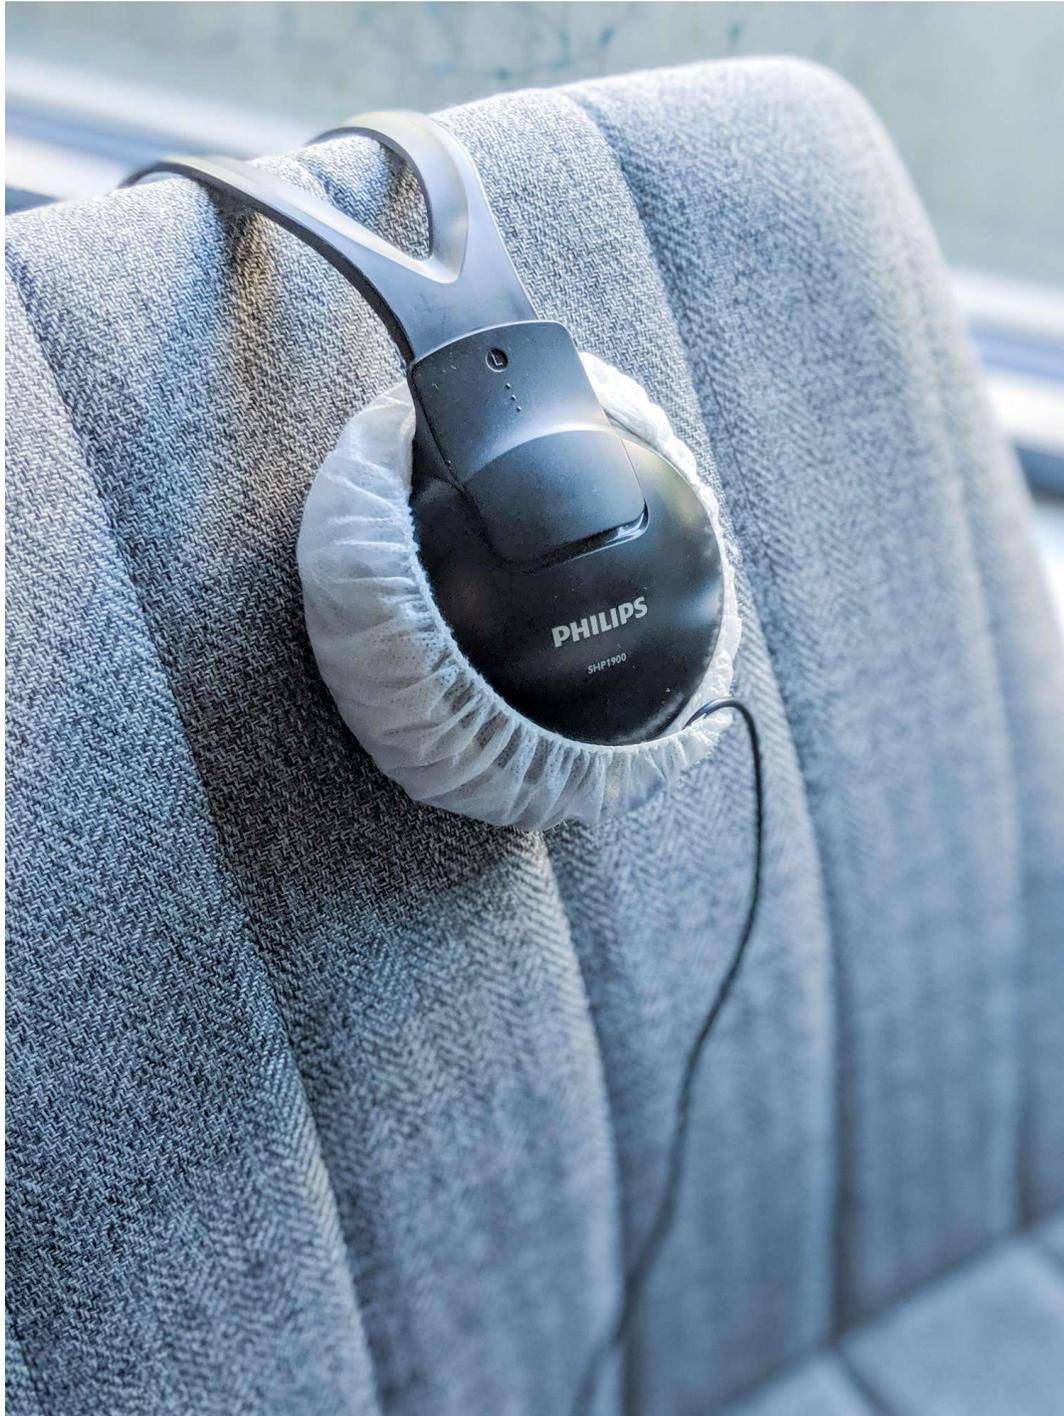

Step 5: Cover the headset with the second disposable headset cover

You will see that the fit will be tighter and thicker with the second disposable headset cover.

Step 6: Place the headset over a chair, table, pillow or anything that is thick and can keep the headset stable and 100% covered from any air/light.

This is **VERY IMPORTANT** because if the headset is not covered properly you risk damaging the headset. NOW you can begin the scanning and therapy as if the person is present once you have the headset covered properly with the sample!

---

*Headset Protection Options:*

---

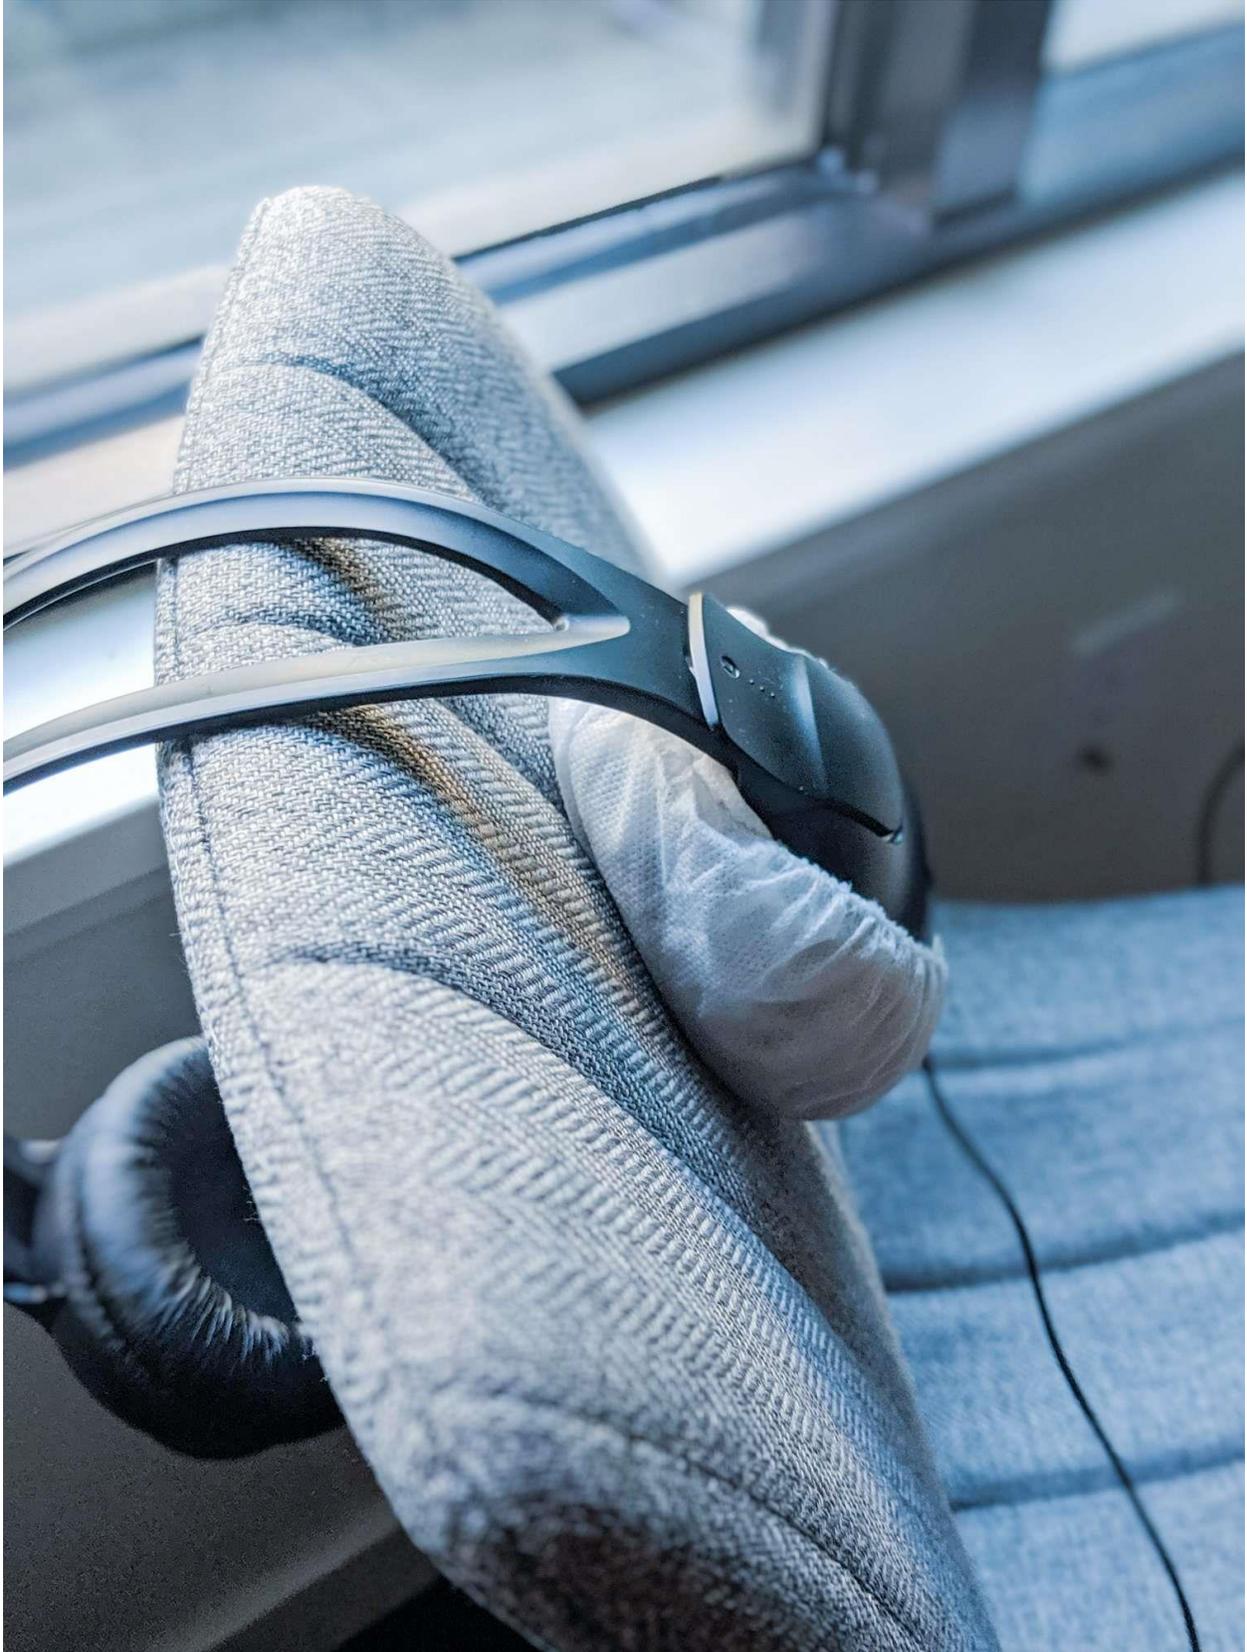

1. Hanging off the table

This method is sure to protect the headset properly (LEFT side with wire covered by the table). However, this may stretch the headset.

## 2. Covered by a chair

3. Headset stand (Amazon)
