*Helpful Email Resources: DIAGNOSIS RESULTS*

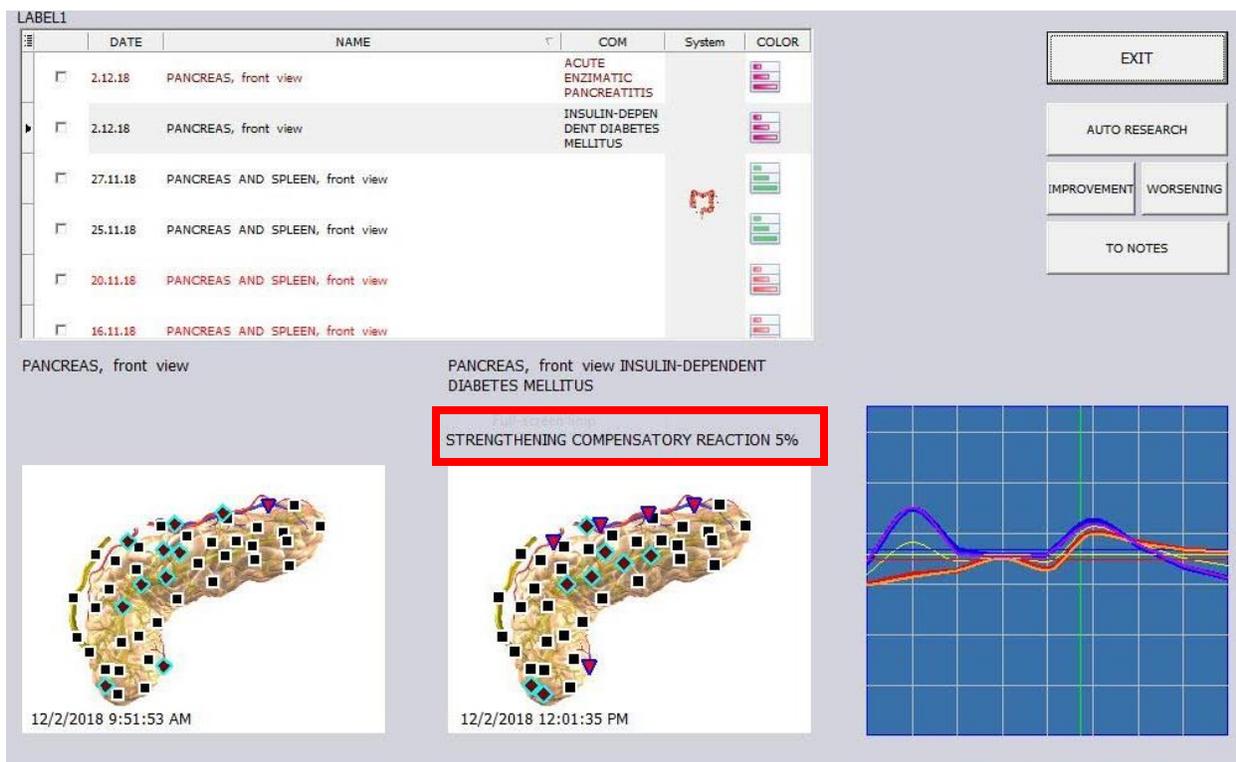

---

I understand that a pathology that strengthens isn't causing any harm. However, I am insulin dependent and take insulin nightly, so I don't know how to explain this

It's the same with my thyroid, I have hashimoto thyroiditis and yet it's strengthen me.

Please help me understand these results.

Thanks

With pathology: Anything that weakens by less than 15% is a problem (p.33 in manual).

So, technically Oberon did pick up on these problems. However, the question should always be about why certain health problems exist rather than confirming them with Oberon because it happens quite often then people look to get diagnosed with Oberon with what they have been diagnosed by a doctor. Misdiagnosis is very common and not only that, that searching for "root causes" is not common practice in most clinics. Oberon looks for root causes.

In a case like this, I would look further into each system to see what else may be there that could be more important, such as a virus, bacteria or microorganism.
