Below you will find 2 pictures of the prostate. The KOD of the prostate is 0.713 in both pictures also the energy level is at 65.

But the lines are closer together on the 18th than on the 11th what is the line telling you but also the redline comes above the blue on what is the line telling you?

Red line is slightly above the blue at 2.6 and 4.9 (I'm guessing because I can't actually see the graph)

2.6 is connective tissues, nerves, etc. (stress related, possibly)

4.9 reproductive organs, liver, skin tissues.

Based on that I would keep doing therapy

Most important piece of information is that there has not been enough therapies and time. Graph will fluctuate day to day until the issue is resolved.

KOD tells us organ is still not well, energy levels confirm and graph fluctuates until the problem has balanced out
