

# SETTING UP OBERON BIOFEEDBACK

## 1. Oberon Package

When your Oberon package arrives, look to make sure you have all the following components:

- Oberon hardware box
- Headset
- Metal cup
- Small blue or black USB
- Black or beige connecting USB cord
- Oberon Manual
- Warranty card

## 2. Connecting the Oberon to Computer

From left to right, the back of the Oberon box contains:

- Power switch
- USB outlet which also connects to the computer on the other end
- Outlet for the metal cup (This photo shows older model, please see next page for newer model and Headset/cup outlets).
- Small outlet for the headset

Updated units will have a outlet for the cup and headset which look the same but the photo is there to guide you and show where to connect each one.

Cup

Headset

Before installing software, the device must be connected to the computer via that black USB cord and powered on using the POWER switch.

### *3. PROTECTING THE HEADSET*

Oberon headset is the one piece of equipment not included in the 3 year warranty. This is simply because the headset is very sensitive and if not taken care of properly can burn out. Headsets are specially made and are an essential part of your package. Please ensure proper use at all times.

The cost of a headset is \$400 (plus shipping).

The trigger sensors in the headset are sensitive to light so it is important to have them "covered" when the headset is not ON someone's head.

Here is a perfectly safe way to keep your headset while keeping machine ON.

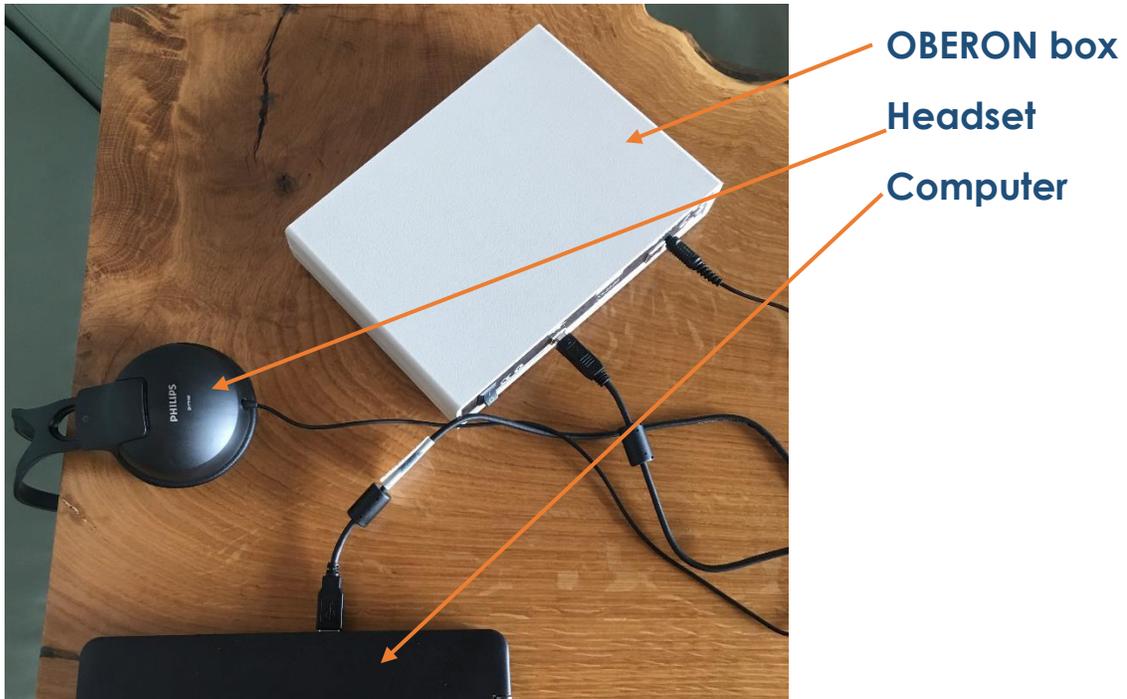

This prevents the sensor from “burring out” as you can see the left side of the headset (side with wire) is covered by the table while the other end is hanging off. Once the machine is powered OFF you can place headset directly on the table without covering it this way.

#### 4. FINISHED SET UP

When set up is completed

- ✚ you will have the Oberon connected to the computer via the black USB cord
- ✚ Headset plugged in
- ✚ Headset safely placed on the table

-Most important pieces to have connected are the Box, headset and computer.

-Connecting the metal cup is only necessary when you are planning on using it.

-If you are plugging everything for the first time, also connect the small blue or black USB into the computer as well. This is where you will have the software file for installation.

-Once everything is connected as shown in the photo, you may begin installation on your computer.
